RADinfo SYSTEMS™ Releases Secured DICOMmail

Providing comprehensive security in sending patient data through common Email systems.

DULLES, VA—(PR NEWSWIRE)—January 30, 2008 – RIS/PACS solutions provider, RADinfo SYSTEMS, is proud to announce release of their secured version of PowerPACS DICOMmail software. The software allows physicians to send DICOM image studies and reports through common Email systems. DICOMmail will be available to order at our online purchase center beginning February 1, 2008.

“Working with our clients around the world, it is clear that a simple and secure means of transmitting patient image studies and reports via Internet is essential for patient care. The use of DICOMmail has the potential to change the way patient study information is shared and distributed; it demonstrates how medical facilities can boost efficiency in these matters,” said Dr. Chen-Tai Ma, CEO & President of RADinfo SYSTEMS. “We are confident that it is a complete solution for our clients to retrieve and send any DICOM-format medical image through any common Email system.”

DICOMmail comes with RADinfoSYSTEMS’ Basic RSVS Viewer and presents the ideal solution for physicians seeking outside consultation. The software provides various compression algorithms and full encryption to protect patient information by means of common Email systems. A user simply needs to drag-and-drop files within the DICOMmail program, converting JPEG and BMP images into DICOM format if needed. The user can view the images in the Basic RSVS Viewer after a quick and easy Internet download of the DICOMmail application.

PowerPACS DICOMmail is available to order from RADinfo SYSTEMS. It is the first of its kind—a fast, easy, and affordable Email-based solution to securely share and distribute DICOM images and reports to physicians and patients via the Internet.

About RADinfo SYSTEMS

Since 1993 RADinfo SYSTEMS is leading the revolution towards truly affordable film-less healthcare systems. The company’s products focus on empowering imaging facilities with reliable components of Radiology Information Systems (RIS), Picture Archiving and Communication Systems (PACS), and Teleradiology Systems. RADinfo SYSTEMS develops and integrates DICOM and HL-7 compliant software with modalities and other radiological hardware to deliver state-of-the-art solutions to hundreds of small and large healthcare providers worldwide. Professional services include software development, consultation, integration, installation and 24x7 technical support. RADinfo SYSTEMS’ world headquarters is located in Dulles, Virginia and can be found on the web at www.radinfosystems.com.
